

HOSPITAL BOOKING SYSTEM

SETUP

Frontend setup:

1. Download the zip file and extract it to some folder and later go to the folder(where package.json file located) in the command prompt.
2. Run “**npm install**”
3. After executed the step 2, run “**npm start**”
4. That’s it, our front end is ready. Now we can see this page in browser(<http://localhost:3000>)

Backend setup:

1. Download the zip file and extract it to some folder
2. Go to your application.properties and make sure mysql username & password is configured correctly.
3. Before running an application, please create a database alone and no need to create tables. Spring jpa will take care

CREATE DATABASE hospital_book;

spring.datasource.url=jdbc:mysql://localhost:3306/hospital_book?useSSL=false

spring.datasource.username=root

spring.datasource.password=password

4. For Email notification, please make sure below username & password.
5. spring.mail.username=<YOUR GMAIL ID>

#created in google -> account-> security-> app password

6. spring.mail.password=<YOUR GENERATED PASSWORD>

Once all is configured, please run spring boot application. Backend also ready.
